

# Simplified and Centralized Management

## Simplify, Tier and Unify Administration of Many Diverse Storage Assets

Whether assigning disk space to virtual machines, or keeping mirrored copies up to date between sites, DataCore consolidates and in many cases automates the process. Using the same set of advanced functions across unlike devices means that you only have to learn it once. That familiarity translates into more predictable operations and fewer errors.

*"This rich set of advanced virtualization services from DataCore delivers the highest availability and best use of resources at the most favorable cost. DataCore virtualization technology hits on all cylinders for us."*

- Chris Whitaker, IT Manager, AHTNA
