

Maximize Utilization of Storage Resources

Get the most use from your existing assets before spending on new ones

Trade-offs made when storage devices are packaged into arrays and enclosures cause them to go underutilized. DataCore can tap that substantial unused space helping to:

- Re-purpose direct-attached storage within the new SAN (rather than throw them away)
- Defer major hardware purchases
- Fully use disk space (raise utilization from 30% to 90%)
- Encourage a more eco-friendly, Green IT environment
